D165T - D265T

LV Pole Mounted breaker / digital trip unit

D165T - D265T

LV Pole Mounted breaker / digital trip unit

The protection and management of MV/LV transformers in a rural environment requires specific circuit breakers compatible with significant load differences, thus ensuring full exploitation of the installed power, even in unbalanced operation.

Technical characteristics

1- Post circuit breaker with digital trip unit

	D165T	CIRCUIT BREAKERS	D265T
Reference standard	HN 63-S-11	HN 63-S-11	
Voltage rating	440 V	440 V	
Current rating	165 A	265 A	
Cutout power	4 000 A	6 400 A	
Closing power	6 800 A	11 700 A	
Number of poles	4	4	
Number of outputs	1 output	2 outputs	
Cable sections	25 / 70 mm ²	50 / 150 mm ²	
Breakdown voltage			
• pulse/earth	20 kV	20 kV	
• at 50 Hz	10 kV	10 kV	
• between poles	4 kV	4 kV	
Control system	Manual	Manual	
Installation	on post	on post	

2 - Digital trip unit

	P = 50 kVA			P = 100 kVA			Trip time	P = 160 kVA			Trip time		
	U = 440 V			U = 440 V				U = 440 V					
	I = 72,2 A			I = 144,3 A				I = 231 A

	48	48	200	96	96	400	30 s	7 mn	155	155	650	7 mn	

Trip time as per HN 63-S-11 + corrected values (in bold type) to match the selectivity of the TPC fuses.

Description

Circuit breaker unit

These units (4 poles 3 of which are protected) cut off in air with metal partition chambers to break the arc.

When the circuit breaker is open, a contact makes an electrical link between the transformer neutral and the station structural earth.

When the circuit breaker is closed, a spark gap limits the rise in potential of the LV neutral, in relation to the structural earthing, for a value exceeding 10 kV.

The circuit breaker is installed inside a weatherproof GRP case.

Digital Trip Unit

The Digital Trip Unit protects the three ratings of the post-mounted transformer (50 kVA, 100 kVA and 160 kVA), whether it be a conventional transformer (no internal protection) or a new transformer with protection (TPC).

The transformer protection rating is set by a selector.

The micro-controller assesses the transformer temperature in real time, based on the currents in the three phases and the external ambient temperature. This ambient temperature is computed based on the probe and a mathematical model that is also a function of the three phase currents.

Equipment part numbers

	ERDF P/N	Ensto Novexia P/N
Complete unit D165T with digital unit, metal case and linkage	69 34 037	2003352
Unit D165T without unit, with metal case and linkage	69 34 035	1014429
Complete unit D265T without digital unit, with metal case and linkage	69 34 038	1014432
Tri-rating digital unit (50 kVA, 100kVA et 160 kVA)	69 35 110	2002219
